

Car Counter API Guide

1. Introduction

This API provides endpoints to manage and retrieve the value of a car counter. You can get the current count, increment it by a specific amount, or reset it to zero.

Base URL: <https://ai-powered-car-counting.onrender.com/api/>

GET <https://ai-powered-car-counting.onrender.com/api/counter>

This API will return the total count in the Database

Response:

JSON

```
{  
  "success": true,  
  "count": 6  
}
```

POST <https://ai-powered-car-counting.onrender.com/api/counter/increment/5>

This API increments the counter by the number you put in the end of the API {count}

Response:

JSON

```
{  
  "success": true,  
  "message": "counter increment done successfully.",  
  "newCount": 10  
}
```

PUT <https://ai-powered-car-counting.onrender.com/api/counter/reset>

This API resets the counter to 0

Response:

JSON

```
{
  "success": true,
  "message": "counter reset done successfully.",
  "newCount": 0
}
```
